- 2 females between the ages of 80-100
- 1 male between the ages of 10-20
- 1 male between the ages of 20-40
- 2 males between the ages of 40-60

County level COVID-19 metrics for **Week 43 from October 18– October 24, 2020** have kept **Warren County at the WARNING level**. IDPH uses numerous indicators when determining warning signs of increased risk in the county. A county is considered at a warning level when at least two of the following metrics trigger a warning.

- **New cases per 100,000 people.** If there are more than 50 new cases per 100,000 people in the county. **Warren County: 270 per 100,000**
- **Number of deaths.** This metric indicates a warning when the weekly number of deaths increases more than 20% for two consecutive weeks. **Warren County: 1**
- **Weekly test positivity.** This metric indicates a warning when the 7-day test positivity rate rises above 8%. **Warren County: 11.7%**
- **ICU availability.** If there are fewer than 20% of intensive care units available in the region. **Warren County: 40.5%**
- **Weekly emergency department visits.** This metric indicates a warning when the weekly percent of COVID19-like-illness emergency department visits increase by more than 20% for two consecutive weeks. **Warren County: 8.9%**
- **Weekly hospital admissions.** A warning is triggered when the weekly number of hospital admissions for COVID19-like-illness increase by more than 20% for two consecutive weeks. **Warren County: <5**
- **Tests performed.** This metric is used to provide context and indicate if more testing is needed in the county. **Warren County: 427**

Warren County Health Department
